

*SWEP Laboratories have been carrying out our soil testing for 10 years.*

*We are growers of high quality Lucerne, Oaten, Red Clover and Pasture Hay for the Equine Industry.*

*It is good to be able to use an independent testing laboratory as our soil has high levels of Magnesium and Copper Zinc Manganese and low levels of Calcium, Potassium, Sulphur and Phosphorus. We can track our progress on these simple, but cost effective soil samples.*

*By continually testing our soil we are able to apply the right nutrients to suit the soil and crop at the correct time to end up with a premium product that our market requires.*

*This is prescription farming at its best, simple to understand soil test.*
