### Instructions on collection water samples for analysis:

- Rinse a plastic bottle that has only ever contained water (no soft drink bottles!) with water from the source you want analysed. **DO NOT** rinse with tap water as this may be high in iron or copper and may distort the results.
- If you are testing water from a dam or stream ensure you collect the water away from the edge and without disturbing the bottom sediments.
- Fill the bottle (300ml is plenty) and seal immediately. Tape the lid to prevent leakage.
- Package securely, mark fragile and post to PO Box 583, Noble Park, VIC 3174, Australia.
